The PC keyboard for medical environments

# MediBoard 2.0

## The PC keyboard for medical technology

Special requirements require special solutions. The MediBoard from Hoffmann+Krippner is ideal for use in medical technology.

Its surface is antimicrobial and reliably kills off many viruses and bacteria. The keywi PC keyboard is splash-proof according to IP65, and is therefore easy and fast to clean. The super flat housing withstands not only all common disinfectants but is also beautifully designed.

The tactile lenticular keycaps in innovative GT technology, developed according to a registered process, and the resistive mouse pad guarantee good tactile sensation and easy operation – with and without protective gloves.

This makes the MediBoard from keywi interesting for different medical workplaces, also where a lot of data has to be entered.

- ⊙ Easy and fast to clean
- ⊙ Germs and viruses don't stand a chance
- ⊙ Antimicrobial surface
- ⊙ Plug & play – without installation
